

Dear Hiring Manager,

I am excited to apply for the **Azure Data Engineer** role at your organization. With over three years of experience in designing and optimizing data pipelines on Azure, I bring proven expertise in ADF, Databricks (PySpark), Delta Lake, and Synapse to deliver reliable, scalable, and compliant data solutions.

In my current role at Elevance Health, I have built real-time ingestion pipelines with Kafka and Delta Lake, reducing data latency from three hours to twelve minutes and enabling actionable insights for business users. I have also automated deployments using Terraform and GitHub Actions, cutting deployment errors by 85% and ensuring consistency across environments. Earlier, at CitiusTech and Mphasis, I streamlined ETL pipelines, strengthened HIPAA/GDPR compliance, and developed Power BI dashboards that significantly improved reporting speed and accuracy.

Beyond the technical achievements, I take pride in working collaboratively with stakeholders across analytics, governance, and compliance teams to translate complex requirements into effective data solutions. I am passionate about leveraging data engineering best practices to enhance efficiency, reliability, and business value, and I am eager to bring this commitment to your organization.

Thank you for considering my application. I look forward to the opportunity to contribute my skills and experiences to support your organization's data-driven goals.

Sincerely,

Nagendra K.
